

**NEW HAMPSHIRE**  
**FINAL 2004 LIST OF DESIGNATED USES AND WATERS**  
**THAT ARE THREATENED AND/OR NOT SUPPORTING EACH USE**  
(Excluding fish/shellfish consumption advisories due to mercury (see note 3))

Date: 03/31/2004

Page: 1 of 74

- Notes: 1. See the Consolidated Assessment and Listing Methodology (CALM) for definitions and details regarding how this list was developed.  
2. This list is sorted by Designated Use, then Waterbody Type and then Assessment Unit ID.  
3. By this note, all surface waters in New Hampshire (which have been divided into over 5000 Assessment Units) are also included on this list for fish and shellfish consumption due to statewide advisories issued because of mercury levels in fish/shellfish tissue. To keep the size of this list manageable, mercury impairments for fish/shellfish consumption are not shown below. The summaries presented at the end of each waterbody type for fish and shellfish consumption however, do include impairment due to mercury in fish/shellfish tissue.  
4. Surface waters not included on this list were either fully supporting the use or the use could not be assessed due to insufficient information.  
5. Waters presented on this list may also be threatened or impaired by other pollutants or nonpollutants that require a TMDL.

Waters Threatened and/or Not Supporting		Aquatic Life				
Waterbody Type:		ESTUARY				
Assessment Unit ID	Assessment Unit Name	Assessment Unit Size		Threatened?	Cause(s)	Suspected Source(s)
NHEST600030709-01	LAMPREY RIVER	.16	SQUARE MILES		Dissolved oxygen saturation	Source Unknown
NHEST600030806-01	SQUAMSCOTT RIVER	.47	SQUARE MILES		Dissolved oxygen saturation	Source Unknown
NHEST600030902-01-03	OYSTER RIVER	.45	SQUARE MILES		Dissolved oxygen saturation	Source Unknown
NHEST600031001-02	LOWER PISCATAQUA RIVER	1.24	SQUARE MILES		Other flow regime alterations	Littoral/shore Area Modifications (Non-riverine)
NHEST600031001-09	SOUTH MILL POND	.03	SQUARE MILES		Dissolved oxygen saturation	Source Unknown
NHEST600031004-03-01	TIDE MILL CREEK 1	.03	SQUARE MILES	Y	Copper	Municipal Point Source Discharges
NHEST600031004-03-02	TIDE MILL CREEK 2	.05	SQUARE MILES	Y	Copper	Municipal Point Source Discharges
The totals below include impairment due to mercury in fish/shellfish tissue. (see Note 3)						
Total Size Threatened		.09	SQUARE MILES			
Total Size Not Supporting		2.34	SQUARE MILES			
Total # AUs Not Supporting and/or Threatened		7				
Total Size Not Supporting and/or Threatened		2.43	SQUARE MILES			
Total # AUs		49				
Total Size of All ESTUARY		17.70	SQUARE MILES			
Waterbody Type:		FRESHWATER LAKE

**NEW HAMPSHIRE**  
**FINAL 2004 LIST OF DESIGNATED USES AND WATERS**  
**THAT ARE THREATENED AND/OR NOT SUPPORTING EACH USE**  
(Excluding fish/shellfish consumption advisories due to mercury (see note 3))

Date: 03/31/2004

Page: 9 of 74

- Notes: 1. See the Consolidated Assessment and Listing Methodology (CALM) for definitions and details regarding how this list was developed.  
2. This list is sorted by Designated Use, then Waterbody Type and then Assessment Unit ID.  
3. By this note, all surface waters in New Hampshire (which have been divided into over 5000 Assessment Units) are also included on this list for fish and shellfish consumption due to statewide advisories issued because of mercury levels in fish/shellfish tissue. To keep the size of this list manageable, mercury impairments for fish/shellfish consumption are not shown below. The summaries presented at the end of each waterbody type for fish and shellfish consumption however, do include impairment due to mercury in fish/shellfish tissue.  
4. Surface waters not included on this list were either fully supporting the use or the use could not be assessed due to insufficient information.  
5. Waters presented on this list may also be threatened or impaired by other pollutants or nonpollutants that require a TMDL.

**NEW HAMPSHIRE**  
**FINAL 2004 LIST OF DESIGNATED USES AND WATERS**  
**THAT ARE THREATENED AND/OR NOT SUPPORTING EACH USE**  
(Excluding fish/shellfish consumption advisories due to mercury (see note 3))

Date: 03/31/2004

Page: 17 of 74

- Notes: 1. See the Consolidated Assessment and Listing Methodology (CALM) for definitions and details regarding how this list was developed.  
2. This list is sorted by Designated Use, then Waterbody Type and then Assessment Unit ID.  
3. By this note, all surface waters in New Hampshire (which have been divided into over 5000 Assessment Units) are also included on this list for fish and shellfish consumption due to statewide advisories issued because of mercury levels in fish/shellfish tissue. To keep the size of this list manageable, mercury impairments for fish/shellfish consumption are not shown below. The summaries presented at the end of each waterbody type for fish and shellfish consumption however, do include impairment due to mercury in fish/shellfish tissue.  
4. Surface waters not included on this list were either fully supporting the use or the use could not be assessed due to insufficient information.  
5. Waters presented on this list may also be threatened or impaired by other pollutants or nonpollutants that require a TMDL.

**NEW HAMPSHIRE**  
**FINAL 2004 LIST OF DESIGNATED USES AND WATERS**  
**THAT ARE THREATENED AND/OR NOT SUPPORTING EACH USE**  
(Excluding fish/shellfish consumption advisories due to mercury (see note 3))

Date: 03/31/2004

Page: 25 of 74

- Notes: 1. See the Consolidated Assessment and Listing Methodology (CALM) for definitions and details regarding how this list was developed.  
2. This list is sorted by Designated Use, then Waterbody Type and then Assessment Unit ID.  
3. By this note, all surface waters in New Hampshire (which have been divided into over 5000 Assessment Units) are also included on this list for fish and shellfish consumption due to statewide advisories issued because of mercury levels in fish/shellfish tissue. To keep the size of this list manageable, mercury impairments for fish/shellfish consumption are not shown below. The summaries presented at the end of each waterbody type for fish and shellfish consumption however, do include impairment due to mercury in fish/shellfish tissue.  
4. Surface waters not included on this list were either fully supporting the use or the use could not be assessed due to insufficient information.  
5. Waters presented on this list may also be threatened or impaired by other pollutants or nonpollutants that require a TMDL.

- Notes: 1. See the Consolidated Assessment and Listing Methodology (CALM) for definitions and details regarding how this list was developed.  
2. This list is sorted by Designated Use, then Waterbody Type and then Assessment Unit ID.  
3. By this note, all surface waters in New Hampshire (which have been divided into over 5000 Assessment Units) are also included on this list for fish and shellfish consumption due to statewide advisories issued because of mercury levels in fish/shellfish tissue. To keep the size of this list manageable, mercury impairments for fish/shellfish consumption are not shown below. The summaries presented at the end of each waterbody type for fish and shellfish consumption however, do include impairment due to mercury in fish/shellfish tissue.  
4. Surface waters not included on this list were either fully supporting the use or the use could not be assessed due to insufficient information.  
5. Waters presented on this list may also be threatened or impaired by other pollutants or nonpollutants that require a TMDL.

**Waters Threatened and/or Not Supporting Drinking Water After Adequate Treatment**

**Waterbody Type:**

**FRESHWATER LAKE**

<u>Assessment Unit ID</u>	<u>Assessment Unit Name</u>	<u>Assessment Unit Size</u>	<u>Threatened?</u>	<u>Cause(s)</u>	<u>Suspected Source(s)</u>
NHLAK700060302-09	PENACOOK LAKE	358.60 ACRES		Excess Algal Growth	Transfer of Water from an Outside Watershed
NHLAK700061001-04-01	HARRIS POND	83.00 ACRES		Excess Algal Growth	Transfer of Water from an Outside Watershed
NHLAK700061001-04-02	BOWERS POND	106.40 ACRES		Excess Algal Growth	Transfer of Water from an Outside Watershed
NHLAK700061102-02	CANOBIE LAKE	373.40 ACRES		Excess Algal Growth	Municipal (Urbanized High Density Area)

**The totals below include impairment due to mercury in fish/shellfish tissue.**

**NEW HAMPSHIRE**  
**FINAL 2004 LIST OF DESIGNATED USES AND WATERS**  
**THAT ARE THREATENED AND/OR NOT SUPPORTING EACH USE**  
(Excluding fish/shellfish consumption advisories due to mercury (see note 3))

Date: 03/31/2004

Page: 41 of 74

- Notes: 1. See the Consolidated Assessment and Listing Methodology (CALM) for definitions and details regarding how this list was developed.  
2. This list is sorted by Designated Use, then Waterbody Type and then Assessment Unit ID.  
3. By this note, all surface waters in New Hampshire (which have been divided into over 5000 Assessment Units) are also included on this list for fish and shellfish consumption due to statewide advisories issued because of mercury levels in fish/shellfish tissue. To keep the size of this list manageable, mercury impairments for fish/shellfish consumption are not shown below. The summaries presented at the end of each waterbody type for fish and shellfish consumption however, do include impairment due to mercury in fish/shellfish tissue.  
4. Surface waters not included on this list were either fully supporting the use or the use could not be assessed due to insufficient information.  
5. Waters presented on this list may also be threatened or impaired by other pollutants or nonpollutants that require a TMDL.

Waters Threatened and/or Not Supporting		Fish Consumption				
Waterbody Type:		RIVER

**NEW HAMPSHIRE**  
**FINAL 2004 LIST OF DESIGNATED USES AND WATERS**  
**THAT ARE THREATENED AND/OR NOT SUPPORTING EACH USE**  
(Excluding fish/shellfish consumption advisories due to mercury (see note 3))

Date: 03/31/2004

Page: 49 of 74

- Notes: 1. See the Consolidated Assessment and Listing Methodology (CALM) for definitions and details regarding how this list was developed.  
2. This list is sorted by Designated Use, then Waterbody Type and then Assessment Unit ID.  
3. By this note, all surface waters in New Hampshire (which have been divided into over 5000 Assessment Units) are also included on this list for fish and shellfish consumption due to statewide advisories issued because of mercury levels in fish/shellfish tissue. To keep the size of this list manageable, mercury impairments for fish/shellfish consumption are not shown below. The summaries presented at the end of each waterbody type for fish and shellfish consumption however, do include impairment due to mercury in fish/shellfish tissue.  
4. Surface waters not included on this list were either fully supporting the use or the use could not be assessed due to insufficient information.  
5. Waters presented on this list may also be threatened or impaired by other pollutants or nonpollutants that require a TMDL.

Waters Threatened and/or Not Supporting		Primary Contact Recreation

**NEW HAMPSHIRE**  
**FINAL 2004 LIST OF DESIGNATED USES AND WATERS**  
**THAT ARE THREATENED AND/OR NOT SUPPORTING EACH USE**  
(Excluding fish/shellfish consumption advisories due to mercury (see note 3))

Date: 03/31/2004

Page: 56 of 74

- Notes: 1. See the Consolidated Assessment and Listing Methodology (CALM) for definitions and details regarding how this list was developed.  
2. This list is sorted by Designated Use, then Waterbody Type and then Assessment Unit ID.  
3. By this note, all surface waters in New Hampshire (which have been divided into over 5000 Assessment Units) are also included on this list for fish and shellfish consumption due to statewide advisories issued because of mercury levels in fish/shellfish tissue. To keep the size of this list manageable, mercury impairments for fish/shellfish consumption are not shown below. The summaries presented at the end of each waterbody type for fish and shellfish consumption however, do include impairment due to mercury in fish/shellfish tissue.  
4. Surface waters not included on this list were either fully supporting the use or the use could not be assessed due to insufficient information.  
5. Waters presented on this list may also be threatened or impaired by other pollutants or nonpollutants that require a TMDL.

**NEW HAMPSHIRE**  
**FINAL 2004 LIST OF DESIGNATED USES AND WATERS**  
**THAT ARE THREATENED AND/OR NOT SUPPORTING EACH USE**  
(Excluding fish/shellfish consumption advisories due to mercury (see note 3))

Date: 03/31/2004

Page: 65 of 74

- Notes: 1. See the Consolidated Assessment and Listing Methodology (CALM) for definitions and details regarding how this list was developed.  
2. This list is sorted by Designated Use, then Waterbody Type and then Assessment Unit ID.  
3. By this note, all surface waters in New Hampshire (which have been divided into over 5000 Assessment Units) are also included on this list for fish and shellfish consumption due to statewide advisories issued because of mercury levels in fish/shellfish tissue. To keep the size of this list manageable, mercury impairments for fish/shellfish consumption are not shown below. The summaries presented at the end of each waterbody type for fish and shellfish consumption however, do include impairment due to mercury in fish/shellfish tissue.  
4. Surface waters not included on this list were either fully supporting the use or the use could not be assessed due to insufficient information.  
5. Waters presented on this list may also be threatened or impaired by other pollutants or nonpollutants that require a TMDL.

**NEW HAMPSHIRE**  
**FINAL 2004 LIST OF DESIGNATED USES AND WATERS**  
**THAT ARE THREATENED AND/OR NOT SUPPORTING EACH USE**  
(Excluding fish/shellfish consumption advisories due to mercury (see note 3))

Date: 03/31/2004

Page: 74 of 74

- Notes: 1. See the Consolidated Assessment and Listing Methodology (CALM) for definitions and details regarding how this list was developed.  
2. This list is sorted by Designated Use, then Waterbody Type and then Assessment Unit ID.  
3. By this note, all surface waters in New Hampshire (which have been divided into over 5000 Assessment Units) are also included on this list for fish and shellfish consumption due to statewide advisories issued because of mercury levels in fish/shellfish tissue. To keep the size of this list manageable, mercury impairments for fish/shellfish consumption are not shown below. The summaries presented at the end of each waterbody type for fish and shellfish consumption however, do include impairment due to mercury in fish/shellfish tissue.  
4. Surface waters not included on this list were either fully supporting the use or the use could not be assessed due to insufficient information.  
5. Waters presented on this list may also be threatened or impaired by other pollutants or nonpollutants that require a TMDL.

Waters Threatened and/or Not Supporting		Shellfishing			
Waterbody Type:		OCEAN			
Assessment Unit ID	Assessment Unit Name	Assessment Unit Size	Threatened?	Cause(s)	Suspected Source(s)
NHOCN000000000-09-02	ATLANTIC OCEAN - STAR ISLAND BEACH	.00		Polychlorinated biphenyls	Source Unknown
NHOCN000000000-10	ATLANTIC OCEAN - WALLIS SANDS WWTP OUTFALL	.04	SQUARE MILES	Dioxin (including 2,3,7,8-TCDD) Polychlorinated biphenyls	Source Unknown Source Unknown
NHOCN000000000-11	ATLANTIC OCEAN - RYE HARBOR	.07	SQUARE MILES	Dioxin (including 2,3,7,8-TCDD) Polychlorinated biphenyls	Source Unknown Source Unknown
The totals below include impairment due to mercury in fish/shellfish tissue. (see Note 3)					
Total Size Threatened		.00	SQUARE MILES		
Total Size Not Supporting		70.20	SQUARE MILES		
Total # AUs Not Supporting and/or Threatened		27			
Total Size Not Supporting and/or Threatened		70.20	SQUARE MILES		
Total # AUs		27			
Total Size of All OCEAN		70.20	SQUARE MILES
